

Cow&Gate Growing Up Milk is specially designed to help meet the increased nutritional requirements of toddlers from 1 year + who have relatively high nutritional needs during this rapid stage of growth and development.

Cow&Gate Growing Up Milk is a nutritionally superior alternative to cow's milk. It provides more nutrients that the toddler may be deficient in, which are not supplied adequately in cow's milk (e.g. Iron and Vitamin D) and less of those nutrients which are often over consumed by toddlers (e.g. sodium, saturated fat and protein) and has been designed specifically to complement solid food in the toddler diet. Cow&Gate Growing Up Milk contains Prebiotic Oligosaccharides and is enriched with essential nutrients, including extra iron for brain development.

Cow&Gate Growing Up Milk is available in 200ml plastic bottles, 2x400ml plastic bottles and 900g Eazypack powder.
